

**Bovine Serum Albumin (BSA),**  
Immunohistochemical Grade

CatNo **ESP5251-50**

BatchNo: See label

Storage: 2 - 8°C

Expiration date: See label

**Amount:** 50 g

**Remarks:** **Bovine Serum Albumin** (also known as BSA) is a protein derived from bovine blood. It is used in fields like cell culture, molecular biology, protein biochemistry, and detection techniques. Further, **BSA protein** is commonly used as reference standard in total protein quantification. Contains 583 amino acid residues derived from the prototypical bovine serum albumin sequence. This ultrapure grade of bovine serum albumin (BSA) can be used as a diluent or a blocking agent. It is free of impurities present in other grades of BSA which can introduce artifacts or increase background in immunohistochemical staining, ELISAs, or blot development.
