Uses

- 1) Measure out 90% of final required volume of water. Water temperature should be 15-20°C.
- 2) While gently stirring the water, add the powdered medium (9.55 g/L). Stir until dissolved. Do not heat.
- 3) Rinse original package with a small amount of water to remove all traces of powder. Add to solution in step 2.
- 4) While stirring, adjust the pH of the medium to 0.1-0.3 pH units below the desired pH since it may rise during filtration. The use of 1 N HCl or 1 N NaOH is recommended.
- 5) Add additional water to bring the solution to final volume.
- 6) Sterilize immediately by filtration using a membrane with a porosity of 0.22 microns.
- 7) Aseptically dispense medium into sterile container.

This product is for in vitro research use only. It is not a medical device and it is not intended for diagnostic or therapeutic purposes.
